# Enhanced Mn

## Alloy Casting

Resources Unity offers its standard M80-1=Mn14, M80-2=Mn18, M80-3=Mn21 and M80-X=Mn23 series of high manganese alloy casting. The standard grades of offerings can, in most cases, deliver improvement in value for money that the market has to offer.

In addition to standard grades, Resources Unity newer technology to produce its Enhanced Mn grade has more advantages in overall performance by:

1. Extended Service Life
2. Reliable and Consistent Delivery
3. Great ROI
4. No Hassles in Success Duplication
5. Successful Implementation across all crusher types

The Enhanced Mn is Hardened manganese made by upgraded technology of chemistry, making process and facility automation. The finished product of Enhanced Mn retains impact toughness while achieves finer micro-structure that obtains increased through-hardened feature protecting against aggressive abrasions in crusher lining application.

Enhanced Mn is to fill in the gap, where applications to Resources Unity hard-facing technology proves incompatible.
